PROFESSIONAL SUMMARY

AI & Data Science undergraduate (2026 Graduating Batch) seeking the Automotive Technology Internship at Valeo, bringing hands-on experience in NLP, Deep Learning, and Machine Learning model development. Completed internships in language translation AI and healthcare ML prediction systems, achieving measurable gains in model accuracy and performance. Strong foundation in Python, TensorFlow, PyTorch, and data analytics, with a growing interest in automotive technology and a proven ability to collaborate and solve problems in fast-paced engineering environments.

TECHNICAL SKILLS

Programming: Python, C, SQL, R
AI/ML: Artificial Intelligence, Machine Learning, Deep Learning, NLP
Libraries & Frameworks: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy
Core CS: Data Structures & Algorithms, OOPS, DBMS
Tools & Platforms: Git, VS Code
Soft Skills: Teamwork, Problem-Solving, Communication, Adaptability
Areas of Interest: Automotive Technology, Intelligent Mobility, Applied AI/ML Systems

INTERNSHIP EXPERIENCE

AI/NLP Intern | *RETECH Solutions* 06/2024 – 07/2024

- Developed and optimized Transformer-based multilingual NLP models using TensorFlow & PyTorch, improving translation quality by ~12% on BLEU and ROUGE metrics
- Fine-tuned model architecture and preprocessing pipeline, boosting translation accuracy by 8% across 3+ language pairs and reducing evaluation error rate

ML Intern | *Aadhyaa Skills and Research Centre* 06/2023 – 07/2023

- Built and fine-tuned disease prediction models (Logistic Regression, Random Forest, SVM) using feature engineering and hyperparameter tuning, improving classification accuracy by 11% to 94%
- Reduced model prediction error by 15% through systematic cross-validation and feature selection across multiple health datasets

PROJECTS

Disease Prediction System | *Python, Scikit-learn* 06/2023 – 10/2023

- Tackled class imbalance and noisy clinical features across multiple disease datasets by engineering new predictive features and tuning hyperparameters
- Built and compared Logistic Regression, Random Forest, and SVM models, achieving 94% classification accuracy on the best-performing model

AI-Powered Medicinal Plant Identification System | *Python, CNN, ResNet* 11/2025 – 03/2026

- Curated and preprocessed a multi-class image dataset spanning 30+ Indian medicinal plant species to address variation in lighting, angle, and leaf texture
- Developed and deployed a CNN-based classification system using ResNet & EfficientNet via a Streamlit web app, achieving over 95% multi-class accuracy

CERTIFICATIONS

- Python for Data Science — NPTEL (IIT Madras), Elite, 2025
- Artificial Intelligence: Concepts and Techniques — NPTEL (IISc Bangalore), 2025
- Deep Learning — NPTEL (IIT Ropar), 2025

EDUCATION

B.Tech, Artificial Intelligence and Data Science
Hindustan University, Chennai
CGPA: 8.74 / 10 | No history of arrears
