Mohammed Thalib TM

Automation Engineer & Software Engineer

md.thalib.dev@gmail.com | linkedin/mt-thalib | +91-8825915327 | Portfolio/thalib.port

Summary

Junior Software Engineer and Cloud Automation enthusiast with 8 months of experience focused on building reliable, scalable infrastructure and highly-available applications. Proven track record in orchestrating zero-downtime deployment pipelines using Github Actions and Docker, automating complex data processing workflows via n8n and GCP, and contributing to full-stack development initiatives. Passionate about engineering fast, maintainable cloud-native systems.

Experience

UC Operations LLC Dec. 2025 – Present
Software Engineer *Freelance – Remote*

- Automated complex data processing workflows using **n8n, Google Cloud APIs**, and **Firebase** across **5+ successful enterprise deployments** as a solo contributor, ensuring **zero-bug production releases**.
- Served as the **architect** and **developer** for an advanced, **ML-powered chatbot** application serving live data querying operations.
- Engineered **highly available** technology stacks utilizing **Node.js**, **Python**, and robust **CI/CD pipelines** to streamline internal operations and significantly enhance deployment consistency.

Technical Skills

Cloud/DevOps: AWS, Google Cloud (GCP), Docker, ServiceNow.
Automation & Workflows: n8n, GitHub Actions,, Jenkins.
Languages: Python, Bash/Shell Scripting, HTML, CSS
Databases: PostgreSQL, MongoDB, Supabase, Firebase
Frameworks: SDLC, Agile, Team Player.

Projects

Logistics Automation | *Javascript, Apps Script, API Integrations, Google Sheets* ***Freelance***

- Engineered an automated, hourly pipeline that dynamically provisions tracking sheets, synchronizes batch data, and programmatically manages user access controls and cell-locking to ensure data integrity.
- Developed a financial reconciliation system that cross-references historical FOB prices to flag unauthorized increases and automatically validates supplier invoices.

Warehouse Automation | *Python, Git, GCP, Firebase, APIS, Google Sheets* ***Freelance***

- Developed a Python API integration to autonomously extract and aggregate historical pricing data from distributed invoices and operational documents, dynamically handling access permissions and missing records.
- Engineered a sandbox-tested validation pipeline to algorithmically verify extracted prices against master totals before updating live systems.

ML Outreach & Product Bot | *Python, GCP, Supabase, Ollama, React.js* ***Freelance***

- Built a Discovery Phase pipeline using image scraping to aggregate hundreds of SKUs into a supplier-first.
- Engineered an enterprise-grade machine learning bot to automate intelligent responses and streamline complex user interactions and secure APIs for live data querying, enabling real-time information retrieval.

3D Interactive Web Portfolio | *React, Next.js, Spline, GSAP* Live Demo

- Developed a fully responsive, visually advanced 3D portfolio leveraging Spline WebGL runtime for dynamic interactive elements.
- Utilized GSAP and Framer Motion to construct fluid, buttery-smooth scroll-triggered animations and interface reveals.
- Integrated a serverless Next.js architecture using Resend for dynamic email routing, deployed seamlessly to Vercel.

Education

The New College 2022 - 2025
Bachelor of Science in Computer Applications *Chennai, TN*

Certification

Cloud DevOps - *Competency Badge by* Intel CloudU.
Welcome to ServiceNow - *Introduction by ServiceNow.*
